Abstract of JP 7080069 (A)

PURPOSE:To prepare the aerosol pharmaceutical with which effective particles at the time of injecting are sufficiently obtd., redispersibility after long-term preservation is good and a change in grain size after the long-term preservation hardly arises by incorporating procatherol or its salt, 1, 1, 1, 2-tetrafluoroethane, isopentane, n-butane and lecithin therein. **CONSTITUTION:**The procatherol or its salt, 1, 1, 1, 2-tetrafluoroethane, isopentane, n-butane and lecithin are incorporated into this aerosol pharmaceutical.; The injecting agents constituting the aerosol pharmaceutical are the 1, 1, 1, 2-tetrafluoroethane, isopentane and n-butane and, therefore, there is no possibility of destroying the ozone stratosphere and the effective particles at the time of injecting the procatherol or its salt are sufficiently obtd., the dispersibility is good and the redispersibility after long-term preservation is also good. The change in the grain size after the long-term preservation hardly arises.
